a. The monthly housing expenditures of homeowners may or may not include taxes and insurance. Respondents were asked to respond with only principal and interest for all mortgages (including second mortgages and the like). A follow-up question confirms whether their response includes taxes, insurance, both, or neither.

b. Standard deviation values are listed in parentheses. p < .001. Where means differ significantly from whites, t+tp < .001, t+p < .01, and tp < .05.

Table 3.6 Predicted Values of Neighborhood Proximity to Non-Hispanic Whites and Neighborhood Median Household Income, by Race

Neighborhood Outcome	Whites	Blacks	Latinos	Asians
Proximity to non-Hispanic whites				_
Poor native	27.63%	4.65%	26.88%	10.32%
Poor immigrant	_		15.27	17.10
Affluent native	65.96	30.88	58.11	45.12
Affluent immigrant	_	_	45.91	51.96
Median household income				
Poor native	\$20,013	\$16,894	\$29,304	\$22,979
Poor immigrant	_	<u> </u>	21,230	28,623
Affluent native	61,652	44,255	53,632	64,315
Affluent immigrant	_	<u>-</u>	46,770	66,733

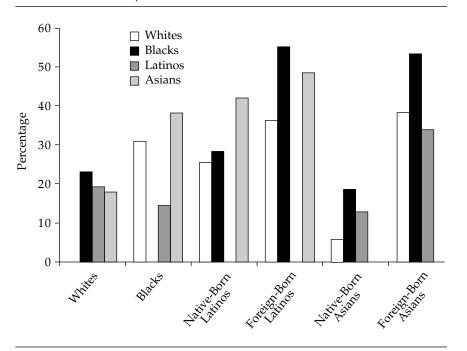

Notes: Poor immigrants have five years or less in the United States, speak little English, do not own their homes, and are in the lowest categories for income, assets, and education (less than \$20,000 in income, zero or negative assets, and less than high school). Poor natives are comparable to poor immigrants, except that they are U.S.-born and have high English ability. Affluent natives are U.S.-born, have high English ability, are homeowners, and place in the highest categories for income, assets, and education (\$90,000 and over in income, over \$10,000 in assets, and an advanced degree). Affluent immigrants are comparable to affluent natives, except that they have been in the United States more than ten years and report having "medium" English ability. All other characteristics are standardized to the overall sample mean.

Figure 4.1 Respondents Holding Negative Stereotypes of Out-Groups, by Race and Nativity Status

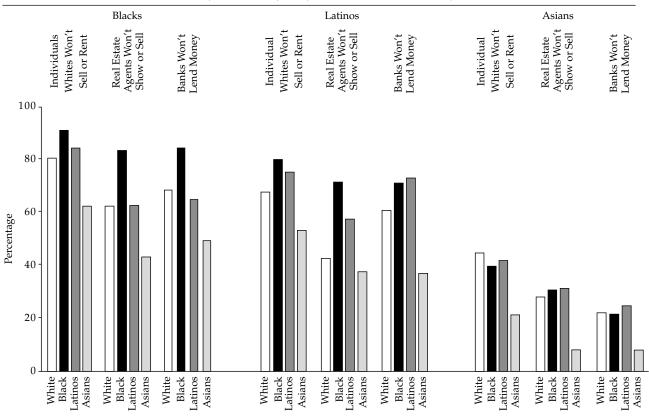

Notes: Measures are stereotype difference scores greater than 1.00. p < .001 for all except negative stereotyping of whites (p < .01).

Figure 4.2 Respondents Perceiving Social Distance Between Their Own Group and Various Out-Groups, by Race and Nativity Status

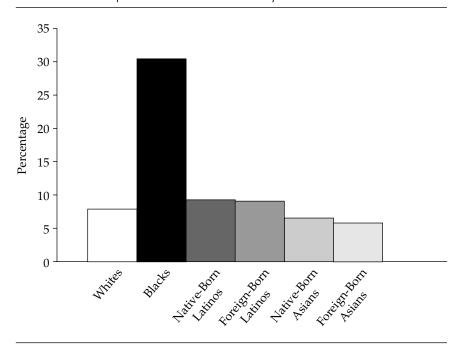

Notes: Measures are social distance difference scores greater than 1.00. p < .001 for all except social distance from whites (p < .05).

Notes: Comparisons are by respondent race, within target group. Overall index measure is the average of the three individual items. Scores range from 1 (almost never) to 4 (very often). Cronbach's alpha is .79 for the black and Latino target groups and .81 for the Asian target group.

**** p < .001; where mean values differ significantly from whites, ††† p < .001, †† p < .01, and † p < .05

Table 4.4 Perceptions of Blacks, Latinos, and Asians as Competitive Threats to Economic Opportunities and Political Influence, by Respondent Race and Nativity Status: Summary Statistics

Target Group	Whites	Blacks	Native- Born Latinos	Foreign- Born Latinos	Native- Born Asians	Foreign- Born Asians
Blacks						
Job threat	26.61%	_	27.58%	30.57%	13.96%	25.96%
Political threat	30.47		26.46	42.10	11.59	36.34
Mean overall threat	3.51	_	3.63	4.51+++	2.66	3.81
Latinos						
Job threat	26.59%	52.37%	_		10.13%	32.20%
Political threat	34.56	44.56	_	_	18.68	48.01
Mean overall threat	3.67	4.65†††	_	_	2.35	4.26†
Asians						
Job threat	31.89%	63.67%	41.99%	49.92%		_
Political threat	31.99	54.10	46.88	58.20	_	_
Mean overall threat	3.74	5.31+++	4.32	6.02†††	_	_

Notes: Percentages are for respondents reporting that they "generally" or "strongly" agreed that the group posed a threat. Mean overall threat is the combined average of respondents' scores on individual items, measured as a 1–5 scale where 1 indicates no perceived threat, 5 indicates strong perceived threat, and 3 is a neutral category. Cronbach's alpha is .78 for blacks, .76 for Latinos, and .80 for Asians. For percentages, p < .001 except black political threat (p < .01). For mean overall threat values significantly different from whites, t + p < .001, t + p < .01, and t + p < .05.

*** p < .001; ** p < .01; * p < .05

a. Competitive threat items also relied on an experimental ballot, such that roughly one-third of whites considered blacks (N = 234), Latinos (N = 241), and Asians (N = 228); about half of each nonwhite group considered group competition from the remaining two groups (for blacks, 512 got the Latino ballot and 523 the Asian ballot; 441 Latinos considered blacks, and 467 responded to Asians as competitive threats; among Asian respondents, 505 considered whether or not blacks pose a competitive threat, while 509 responded to the Latino items). b. For same-race neighbors, racial attitudes combine responses for all out-groups (for example, for white respondents, attitudes toward blacks, Latinos, and Asians are combined for perceived SES, stereotype, and social distance measures and for competitive threat).

White discrimination	_	-0.093**	0.070	0.113**	-0.010	-0.043

a. Owing to a split ballot, roughly one-third of whites considered blacks (N = 234), Latinos (N = 241), and Asians (N = 228); about half of each nonwhite group considered group competition with each remaining group (512 blacks got the Latino ballot, and 523 got Asians; 96 native-born and 345 foreign-born Latinos got the black ballot, 78 native-born and 389 foreign-born Latinos got Asians; 58 native-born and 447 foreign-born Asians considered blacks, 65 native-born and 443 foreign-born Asians considered Latinos).

b. For same-race neighbors, racial attitudes combine responses for all out-groups (for example, for white respondents, attitudes toward blacks, Latinos, and Asians are combined for perceived SES and stereotype difference measures, social distance, and competitive threat; for nonwhites, these and the second instance of housing discrimination are pooled).
